CRESTED DOG'S-TAIL (*Cynosurus cristatus* L.).

A tufted perennial grass, 1 to 2 feet high, with an abundance of fine leaves. It is a native of Europe and adapted to cultivation in moist, temperate regions. It is adapted chiefly for mixture with other grasses or for lawns, and is said to do well in the shade. Sown with other grasses, it forms a good bottom grass in permanent pastures.

*Sowing.*—When sown alone, 20 to 25 pounds per acre should be used.
